

ERP Governance and Operating Architecture

Mingalar Mobile Distribution Co., Ltd.

1. Company Background

Mingalar Mobile Distribution Co., Ltd. is currently structured in ERPNext as a multi-branch trading and distribution business operating in Myanmar. The system already contains a meaningful operational footprint, including one legal company, two branches, multiple warehouses, an established customer base, an active supplier base, and a product catalog covering several commercial categories.

The existing ERP structure indicates a business model centered on the distribution of smartphones, phone accessories, memory and storage products, networking products, CCTV and security devices, spare parts and service-related items, and fixed assets. Customer coverage extends across multiple territories, including Yangon, Mandalay, Bago, Taunggyi, and Naypyitaw. The commercial footprint includes both retail and wholesale channels, with some commercial account activity.

The current ERP landscape should therefore be treated as a valid business foundation rather than a temporary demonstration setup. The recommended architecture is based on preserving the existing commercial and operational footprint while strengthening the governance, organizational, role-based, and control layers required for long-term manageability.

2. Existing Business Operating Footprint

2.1 Legal Entity Structure

The system is currently configured with a single legal entity:

- Mingalar Mobile Distribution Co., Ltd.

This structure is appropriate for the present stage and does not require redesign unless future corporate, tax, or consolidation requirements justify additional legal entities.

2.2 Branch Structure

The current branch model includes:

- Yangon
- Mandalay

These branches should be preserved as the principal operating branches of the organization. The branch model is already sufficient to support branch-based accountability, stock responsibility, local sales execution, and management reporting.

2.3 Warehouse Structure

The current warehouse landscape includes ten warehouses, covering central stockholding, branch stockholding, showroom stock, transit stock, returns and damaged stock, and other support locations. This is consistent with a real-world distribution environment and should be preserved.

The warehouse structure currently includes:

- All Warehouses - MMOB
- Yangon Main Warehouse - MMOB
- Yangon Showroom Counter - MMOB
- Mandalay Warehouse - MMOB
- Goods In Transit - MMOB
- Transit Warehouse - MMOB
- Returns and Damaged - MMOB
- Stores - MMOB
- Finished Goods - MMOB
- Work In Progress - MMOB

2.4 Customer Structure

The system contains an established customer base distributed across multiple territories and customer groups. The commercial structure includes:

- Retail customers
- Wholesale customers
- Some commercial customers

This customer model is sufficiently realistic and should be preserved. Future redesign should focus on governance, ownership, segmentation, and reporting rather than changing the customer footprint itself.

2.5 Product Structure

The item catalog already reflects a commercially viable distribution business with the following principal product families:

- Smartphones
- Phone Accessories
- Memory & Storage
- Networking
- CCTV & Security
- Spare Parts & Service
- Small Gadgets
- Fixed Assets

This product structure is strong enough to serve as the long-term item hierarchy, subject only to future refinement in naming, classification discipline, and ownership.

2.6 Supplier Structure

The supplier base includes electronics importers, local wholesale suppliers, accessories suppliers, logistics/customs providers, and regional distributors. This indicates that procurement is already diverse enough to support both local and import-oriented sourcing.

3. Recommended Organization Structure

3.1 Organization Design Principle

The recommended organization structure is a **matrix operating model** combining functional governance with branch execution.

Under this model:

- functional departments own policy, standards, controls, and approvals
- branches own day-to-day operational execution
- central management owns financial discipline, pricing control, and strategic oversight

This structure is appropriate for a multi-branch trading and distribution business and provides better control than either a purely centralized or purely branch-driven model.

3.2 Executive Structure

The recommended executive structure is:

- Managing Director
- Commercial and Operations Head
- Finance and Administration Head

This structure separates commercial leadership from financial control while preserving executive oversight.

3.3 Functional Structure

The recommended functional structure is:

- Sales and Channel Management
- Procurement and Supplier Management
- Warehouse and Inventory Control
- Logistics and Distribution
- Finance and Accounts
- Customer Service and After-sales
- HR and Administration
- ERP and IT Governance
- Internal Control / Audit

3.4 Branch Operating Structure

The recommended branch operating structure is:

- Yangon Branch Operations
- Mandalay Branch Operations

These branch units should be treated as operating environments within the same company, not as separate companies. They should carry responsibility for local execution, local stock handling, local customer responsiveness, and branch-level reporting.

4. Department Design

4.1 Department Design Objective

The existing department structure appears mixed and partially duplicated. The recommended approach is to standardize it into one formal hierarchy that supports reporting, employee assignment, responsibility allocation, and permission design.

4.2 Recommended Department Hierarchy

4.2.1 Level 1

- All Departments

4.2.2 Level 2

- Executive Management
- Sales and Channel Management
- Procurement
- Warehouse and Inventory
- Logistics and Distribution
- Finance and Accounts
- Customer Service
- HR and Admin
- ERP and IT
- Internal Control

4.2.3 Level 3

- Retail Sales
- Wholesale Sales
- Yangon Branch Operations
- Mandalay Branch Operations
- Accounts Receivable
- Accounts Payable
- Inventory Control
- Returns and Service

4.3 Department Governance Principle

Each department should exist only where it serves a management, reporting, or control purpose. Departments should not be duplicated merely for labeling convenience. A standardized department structure is essential before implementing detailed user, employee, and approval logic.

5. Branch Governance Model

5.1 Branch Governance Objective

The two branches should become operational accountability centers rather than simple master records. Each branch should be measurable, governable, and visible within the ERP.

5.2 Branch Responsibilities

Each branch should have responsibility for:

- local sales execution
- customer coordination
- local fulfillment activity
- branch-level stock handling
- participation in receivable follow-up
- operational issue escalation

5.3 Central vs Branch Authority

Branch operations should not independently control the following:

- company-wide pricing policy
- final exceptional discounts
- major procurement approvals
- financial release
- cross-functional control logic
- system-wide master governance

The recommended model is therefore:

centralized control with branch-level execution

6. Warehouse Governance Model

6.1 Warehouse Classification

The warehouse structure should be preserved and formally classified.

6.1.1 Primary Operating Warehouses

- Yangon Main Warehouse - MMOB
- Mandalay Warehouse - MMOB

These should be treated as the principal stockholding and fulfillment warehouses.

6.1.2 Sales-Point Warehouse

- Yangon Showroom Counter - MMOB

This warehouse should support fast counter or showroom operations and be governed separately from bulk stock locations.

6.1.3 Movement Warehouses

- Goods In Transit - MMOB
- Transit Warehouse - MMOB

These should be treated as control-sensitive movement locations for branch transfer visibility and stock accountability.

6.1.4 Exception Warehouse

- Returns and Damaged - MMOB

This warehouse should be strictly controlled and isolated from normal saleable stock.

6.1.5 Support Warehouses

- Stores - MMOB
- Finished Goods - MMOB
- Work In Progress - MMOB

These should remain in place but should be assigned a defined business purpose and responsible owner.

6.2 Warehouse Governance Principles

Each warehouse should have:

- a defined business purpose
- an accountable owner
- an operational access boundary
- a reconciliation responsibility
- clear rules for transfers, adjustments, and valuation impact

7. Customer and Territory Operating Model

7.1 Customer Segmentation Model

The recommended customer operating model should preserve current customer groups and strengthen governance through commercial segmentation.

The primary customer segments are:

- Retail
- Wholesale
- Commercial

Each segment should support differentiated pricing logic, sales ownership, reporting logic, and receivable treatment.

7.2 Territory Model

The current territory model should be preserved and used operationally:

- Yangon
- Mandalay
- Bago
- Taunggyi
- Naypyitaw

7.3 Recommended Customer Ownership Structure

Each customer should eventually be governed by four ownership dimensions:

- assigned sales owner
- assigned branch
- assigned territory

- assigned receivable follow-up responsibility

This will support stronger accountability in sales execution, customer management, and finance follow-up.

8. Product and Supplier Governance

8.1 Product Governance Model

The current item hierarchy is appropriate and should remain the foundation of the product structure. Governance should be introduced by product family rather than redesigning the categories.

8.1.1 Smartphones

Requires tighter control over pricing, stock movement, and management visibility.

8.1.2 Phone Accessories

Requires operational speed, replenishment visibility, and simplified transaction handling.

8.1.3 Spare Parts and Service

Requires closer linkage to returns, service, and exception handling.

8.1.4 Fixed Assets

Should remain outside normal commercial stock control and be governed by finance and administration.

8.2 Supplier Governance Model

Supplier governance should distinguish among:

- import sourcing
- local procurement
- accessory supply
- logistics/customs services

Recommended supplier governance questions include:

- who initiates supplier onboarding
- who owns commercial negotiation
- who approves purchasing by value or type

- who reviews supplier performance
- who handles logistics-related supplier dependencies

9. Role and Responsibility Framework

9.1 Role Design Principle

The recommended role model should be structured across three layers:

- business function roles
- authority roles
- platform roles

This avoids excessive role complexity and supports cleaner permission design.

9.2 Executive Roles

9.2.1 Managing Director

Responsible for final strategic approval, executive exception approval, and high-level oversight.

9.2.2 Commercial and Operations Head

Responsible for commercial execution, branch operating performance, sales-to-delivery coordination, and cross-functional operational review.

9.2.3 Finance and Administration Head

Responsible for financial control, approval governance, receivable and payable control, and financial risk oversight.

9.3 Sales Roles

9.3.1 Sales Manager

Responsible for sales discipline, team performance, pricing control within policy, and commercial review.

9.3.2 Wholesale Sales Executive

Responsible for wholesale account handling, quotations, sales orders, and commercial account follow-up.

9.3.3 Retail Sales Executive

Responsible for retail channel selling, customer engagement, and routine commercial execution.

9.3.4 Showroom Sales User

Responsible for showroom-facing commercial transactions and counter-level stock interaction.

9.4 Procurement Roles

9.4.1 Purchase Manager

Responsible for procurement governance, supplier review, and purchase approval within policy.

9.4.2 Purchase Officer

Responsible for supplier coordination, quotation gathering, and purchase order preparation.

9.5 Warehouse and Logistics Roles

9.5.1 Warehouse Manager

Responsible for stock integrity, movement control, adjustment review, and warehouse performance.

9.5.2 Warehouse Officer

Responsible for goods receipt, picking, transfer execution, and stock issue processing within authorized warehouse scope.

9.5.3 Inventory Controller

Responsible for stock variance analysis, reconciliation review, and inventory control reporting.

9.5.4 Logistics / Transfer Coordinator

Responsible for inter-warehouse movement visibility, transfer monitoring, and dispatch coordination.

9.6 Finance Roles

9.6.1 Finance Manager

Responsible for approval of payments, financial review, credit control escalation, and sensitive accounting oversight.

9.6.2 Senior Accountant

Responsible for accounting quality review, reconciliation, and controlled financial processing.

9.6.3 Accounts Receivable Officer

Responsible for receipts, collection follow-up, and customer balance monitoring.

9.6.4 Accounts Payable Officer

Responsible for supplier invoice handling, payable preparation, and payment request processing.

9.7 Customer Service Roles

9.7.1 Customer Service Manager

Responsible for complaint governance, after-sales issue oversight, and service response management.

9.7.2 Service / Warranty Officer

Responsible for customer issue logging, service tracking, and resolution follow-up.

9.8 Governance Roles

9.8.1 ERP Administrator

Responsible for user setup, role assignment, workspace configuration, and controlled system administration.

9.8.2 Internal Auditor

Responsible for read-only review, exception monitoring, and process compliance oversight.

10. Permission and Control Architecture

10.1 Permission Design Principle

Permissions should not be designed only by DocType. They should be designed across five control dimensions:

- function
- branch
- warehouse

- customer/territory scope
- authority level

This approach produces a more practical and enterprise-ready security model.

10.2 Permission Layers

10.2.1 Transaction User Layer

Can create and update routine transactions within a restricted business scope.

10.2.2 Functional Supervisor Layer

Can review, submit, and supervise transactions within a function or branch.

10.2.3 Controller Layer

Can review control-sensitive activities across a function or across multiple branches.

10.2.4 Executive Approver Layer

Can approve major exceptions, policy overrides, or high-value decisions.

10.2.5 System Authority Layer

Can maintain the ERP configuration, user model, and governance setup.

10.3 Functional Access Principles

Sales users should not receive unrestricted finance access.

Warehouse users should not receive unrestricted accounting or pricing control.

Finance users should not operate warehouse movements casually.

ERP administration should remain separate from routine business approvals.

Audit access should remain review-oriented and not operational.

11. Role-Based Permission Design

11.1 Sales Permissions

Sales roles should be permitted to create and manage leads, opportunities, quotations, and sales orders within assigned customer, territory, and branch scope. They should not have authority to approve sensitive pricing exceptions or perform financial posting.

11.2 Showroom Permissions

Showroom users should be restricted to showroom-relevant operational flows and stock visibility. They should not receive broad bulk warehouse authority or unrestricted commercial overrides.

11.3 Procurement Permissions

Purchase officers should create and maintain procurement documents, while final commercial approval should remain with procurement and management authority.

11.4 Warehouse Permissions

Warehouse users should be restricted to assigned warehouse scope. Stock reconciliation, write-off, and major adjustment rights should remain limited to managers and controllers.

11.5 Finance Permissions

Finance users should own accounting, payment, and receivable/payable activities. Finance should participate in commercial approval only where credit, cash, or valuation risk is involved.

11.6 Audit Permissions

Audit roles should have broad read access where necessary but no routine transaction ownership.

12. Segregation of Duties

12.1 Control Objective

The segregation of duties design should protect the business from uncontrolled approval, weak audit trail, and excessive reliance on a single user.

12.2 Recommended Separations

The following roles should normally remain separated:

- quotation creator and exceptional pricing approver
- purchase order creator and final purchase approver
- stock adjustment initiator and final inventory/finance approver
- payment preparer and payment releaser
- ERP administrator and internal auditor

Temporary overlaps may occur in a smaller organization, but the target architecture should still preserve these boundaries.

13. Approval Hierarchy

13.1 Approval Design Principle

Approvals should be driven by:

- value thresholds
- exception type
- risk impact

13.2 Sales Approval Hierarchy

Routine commercial approvals should move from Sales Executive to Sales Manager.

Discount exceptions, unusual pricing, or low-margin cases should escalate to Commercial and Operations authority.

Credit-risk cases should involve Finance.

Exceptional or very high-value cases should escalate to executive approval.

13.3 Purchase Approval Hierarchy

Routine procurement should move from Purchase Officer to Purchase Manager.

High-value or financially sensitive procurement should include Finance review.

Exceptional procurement should move to executive approval.

13.4 Inventory Approval Hierarchy

Routine stock movement should remain operational.

Stock adjustment, damaged stock, or reconciliation impact should require manager and finance review depending on value and impact.

13.5 Finance Approval Hierarchy

Routine payments should move through accounting review to finance approval.

Large, unusual, or exceptional financial releases should require higher authority.

14. Role-Based UI and Workspace Design

14.1 UI Design Principle

The recommended UI approach is not a full redesign of ERPNext. The recommended approach is role-based simplification.

The objective is to reduce irrelevant options, surface the correct daily tasks, and present each user with a more focused operating environment.

14.2 Executive Workspace

Should present:

- branch sales comparison
- receivable exposure
- stock value
- pending major approvals
- company performance indicators

14.3 Commercial and Operations Workspace

Should present:

- quotations pending review
- orders pending fulfillment
- branch performance
- stock-out alerts
- delayed transfers
- operational bottlenecks

14.4 Sales Workspace

Should present:

- customer follow-up list
- quotations
- sales orders
- key accounts
- relevant customer balance warning
- quick transaction actions

14.5 Showroom Workspace

Should present:

- showroom stock
- fast-selling items
- quick-entry transactions
- limited navigation clutter

14.6 Procurement Workspace

Should present:

- replenishment triggers
- supplier quotations
- purchase orders in progress
- expected arrivals
- delayed supplier commitments

14.7 Warehouse Workspace

Should present:

- goods to receive
- orders to pick
- transfers in process
- in-transit follow-up
- damaged/returned stock queue

14.8 Finance Workspace

Should present:

- collections due
- payables due
- payment approvals
- branch receivable exposure
- cash position

- journal review queue

14.9 Customer Service Workspace

Should present:

- open complaints
- return/service items
- warranty follow-up
- escalation queue

14.10 Audit Workspace

Should present:

- canceled transactions
- stock adjustments
- unusual journal entries
- delayed approvals
- exception reports

15. Form Simplification Strategy

15.1 Sales Forms

Priority fields should include:

- customer
- items
- quantity
- rate
- warehouse
- delivery date

Advanced accounting and technical sections should be collapsed for ordinary sales users.

15.2 Warehouse Forms

Priority fields should include:

- source warehouse
- target warehouse
- item lines
- movement status
- serial or batch information where applicable

15.3 Finance Forms

Priority fields should include:

- party
- account
- amount
- reference documents
- payment mode
- posting date

15.4 Service Forms

Priority fields should include:

- customer
- item
- issue type
- linked return/service status
- resolution notes

16. Reporting Architecture

16.1 Reporting Design Principle

Each role should have access to three categories of reports:

- operational action reports
- control and approval reports
- performance reports

16.2 Executive Reports

Recommended executive reports include:

- branch sales comparison
- gross margin trend
- receivables aging
- stock value by warehouse
- major approval status

16.3 Sales Reports

Recommended sales reports include:

- quotations pending approval
- sales orders pending fulfillment
- sales by territory
- sales by customer group
- overdue customer exposure

16.4 Warehouse Reports

Recommended warehouse reports include:

- stock balance by warehouse
- stock in transit
- damaged/returned stock
- aging inventory
- stock discrepancy review

16.5 Finance Reports

Recommended finance reports include:

- accounts receivable aging
- accounts payable aging
- payment approval queue

- collection performance
- cash and bank position

16.6 Customer Service Reports

Recommended service reports include:

- open complaints
- service backlog
- return case status
- warranty turnaround

17. Implementation Roadmap

17.1 Phase I - Structural Standardization

This phase should standardize the organizational foundation.

Key activities:

- finalize department structure
- confirm branch operating ownership
- classify warehouses by business purpose
- identify noisy or test records for future cleanup
- define final designation structure

17.2 Phase II - Employee and User Architecture

This phase should establish the people structure.

Key activities:

- define planned employee structure
- define planned user structure
- assign departments and branches
- assign reporting lines
- assign authority levels

17.3 Phase III - Role and Permission Design

This phase should formalize the security model.

Key activities:

- define final role catalog
- map roles to users
- define access by function
- define access by branch and warehouse
- define customer and territory restrictions

17.4 Phase IV - Workflow and Approval Design

This phase should formalize approval logic.

Key activities:

- sales approval logic
- pricing exception logic
- purchase approval logic
- stock adjustment approval logic
- payment approval logic
- exception escalation logic

17.5 Phase V - UI and Workspace Configuration

This phase should translate architecture into user experience.

Key activities:

- create role-based workspaces
- define reports per role
- define dashboard structure
- simplify forms by role
- define priority list views

17.6 Phase VI - Controlled ERP Implementation

This phase should execute system changes.

Key activities:

- create or standardize departments
- create designations
- create employees
- create users
- assign roles and permissions
- configure workflows
- configure workspaces and reports

17.7 Phase VII - Validation and Rollout

This phase should confirm that the architecture works in real operating scenarios.

Key activities:

- test role-based access
- test branch scenarios
- test warehouse movement scenarios
- test finance approval flows
- test reporting visibility
- refine issues before full rollout

18. Strategic Recommendation

The current ERP structure is sufficiently realistic to proceed without redesigning the business footprint. The present priority is not to rebuild the company model, but to introduce formal governance around the existing business structure.

The recommended strategic direction is therefore as follows:

- preserve the current commercial and operational footprint
- standardize the organization and department structure
- implement a formal role and responsibility model
- introduce branch-aware and warehouse-aware permissions
- formalize approval hierarchy and segregation of duties

- simplify ERPNext through role-based workspace design
- implement in controlled phases rather than through ad hoc system changes

ERP Operational Blueprint

Mingalar Mobile Distribution Co., Ltd.

1. Document Objective

This blueprint translates the approved ERP governance architecture into an implementation-ready structure for ERPNext configuration. It is designed to serve as the working reference for organizational setup, employee and user setup, role assignment, permission design, workflow implementation, and workspace deployment.

The blueprint is based on the current ERP footprint already present in the system and preserves the following live business units:

- 1 company
- 2 branches
- 10 warehouses
- 65 customers
- 57 items
- 7 suppliers
- existing territory structure
- existing customer and item grouping structure

The implementation objective is therefore not business redesign, but governance formalization.

2. Current Implementation Baseline

2.1 Company and Branch Baseline

Current structure confirmed in ERP:

- Company: Mingalar Mobile Distribution Co., Ltd.
- Branches:
 - Yangon
 - Mandalay

2.2 Warehouse Baseline

Current warehouses confirmed in ERP:

- All Warehouses - MMOB
- Yangon Main Warehouse - MMOB
- Yangon Showroom Counter - MMOB
- Mandalay Warehouse - MMOB
- Goods In Transit - MMOB
- Transit Warehouse - MMOB
- Returns and Damaged - MMOB
- Stores - MMOB
- Finished Goods - MMOB
- Work In Progress - MMOB

2.3 People Baseline

Current employee structure confirmed in ERP:

- 22 active employees
- employees already distributed across sales, warehouse, purchasing, accounts, HR/admin, IT, customer service, and delivery/logistics
- current employee base already spans both Yangon and Mandalay

This is a strong foundation and means the next implementation stage should be employee-linked, not user-only.

2.4 Department Baseline

The system currently contains duplicated and mixed department structures, including both generic names and company-suffixed names. This should be rationalized before permission design becomes deeper.

2.5 Designation Baseline

The system already contains a sufficiently broad designation library. Only a smaller, controlled subset should be adopted for the operating model.

3. Target Implementation Approach

3.1 Guiding Principle

Implementation should follow this order:

- standardize structural masters
- define employee and reporting architecture
- define user and role architecture
- define permissions and approval logic
- define workspaces and operational views
- validate in controlled scenarios

3.2 Implementation Rule

No redesign should alter the current commercial footprint. The following must remain unchanged during governance implementation:

- branch count
- warehouse count
- customer base
- supplier base
- item structure
- territory structure

4. Final Department Hierarchy

4.1 Department Design Objective

The department structure should be reduced to one controlled hierarchy that supports:

- employee assignment
- reporting lines
- role mapping
- permission logic
- workflow ownership
- management reporting

4.2 Recommended Final Department Structure

4.2.1 Level 1

- All Departments

4.2.2 Level 2

- Executive Management
- Sales and Channel Management
- Procurement
- Warehouse and Inventory
- Logistics and Distribution
- Finance and Accounts
- Customer Service
- HR and Admin
- ERP and IT
- Internal Control

4.2.3 Level 3

- Retail Sales
- Wholesale Sales
- Yangon Branch Operations
- Mandalay Branch Operations
- Accounts Receivable
- Accounts Payable
- Inventory Control
- Returns and Service

4.3 Department Rationalization Plan

Current departments should be mapped into the final structure as follows:

- Sales - MMOB → Sales and Channel Management

- Purchasing - MMOB → Procurement
- Warehouse - MMOB → Warehouse and Inventory
- Delivery and Logistics - MMOB → Logistics and Distribution
- Accounts - MMOB → Finance and Accounts
- Customer Service - MMOB → Customer Service
- HR and Admin - MMOB → HR and Admin
- IT - MMOB → ERP and IT

Generic duplicate departments such as Sales, Accounts, Purchase, Customer Service, and similar legacy placeholders should not remain active as parallel structures after standardization.

5. Final Designation Structure

5.1 Designation Design Objective

The ERP should adopt a controlled designation set that reflects the actual business operating model. Existing designations may remain in the system, but only the approved set should be used for active employee and user planning.

5.2 Recommended Active Designations

5.2.1 Executive and Management

- Managing Director
- General Manager
- Finance Manager
- Sales Supervisor
- Warehouse Supervisor

5.2.2 Commercial and Procurement

- Sales Executive
- Key Account Sales
- Purchasing Officer

5.2.3 Warehouse and Logistics

- Inventory Clerk
- Storekeeper
- Delivery Driver

5.2.4 Finance and Administration

- Accountant
- Cashier
- HR/Admin Officer

5.2.5 Service and Systems

- Customer Service Staff
- IT Support

5.3 Future Controlled Additions

The following designations may be added later if required by operating maturity:

- Inventory Controller
- Senior Accountant
- Customer Service Manager
- ERP Administrator
- Internal Auditor
- Branch Operations Coordinator

These should not be added without corresponding role and responsibility design.

6. Employee Architecture

6.1 Current Employee Base

The system already contains the following active employee footprint:

6.1.1 Sales

- 1 General Manager
- 1 Sales Supervisor
- 3 Yangon Sales Executives

- 1 Mandalay Sales Executive
- 1 Mandalay Key Account Sales

6.1.2 Warehouse

- 1 Yangon Warehouse Supervisor
- 1 Yangon Inventory Clerk
- 1 Yangon Storekeeper
- 1 Mandalay Storekeeper

6.1.3 Procurement

- 1 Yangon Purchasing Officer
- 1 Mandalay Purchasing Officer

6.1.4 Finance

- 2 Accountants
- 1 Cashier

6.1.5 HR / IT / Service / Logistics

- 1 HR/Admin Officer
- 2 IT Support
- 2 Customer Service Staff
- 2 Delivery Drivers

This confirms that the ERP already has a realistic operational staffing model.

6.2 Recommended Employee Grouping by Function

6.2.1 Executive Management

- Managing Director
- General Manager

6.2.2 Sales and Channel Management

- Sales Supervisor
- Sales Executives

- Key Account Sales

6.2.3 Procurement

- Purchasing Officers

6.2.4 Warehouse and Inventory

- Warehouse Supervisor
- Inventory Clerk
- Storekeepers

6.2.5 Logistics and Distribution

- Delivery Drivers
- future Logistics Coordinator if needed

6.2.6 Finance and Accounts

- Accountants
- Cashier
- future Senior Accountant if needed

6.2.7 HR and Admin

- HR/Admin Officer

6.2.8 ERP and IT

- IT Support
- future ERP Administrator if needed

6.2.9 Customer Service

- Customer Service Staff

7. Recommended Reporting Structure

7.1 Reporting Design Principle

Reporting lines should reflect operational control, not merely departmental convenience.

7.2 Proposed Reporting Hierarchy

7.2.1 Executive Layer

- Managing Director
 - General Manager
 - Finance Manager or acting finance lead
 - future ERP Administrator
 - future Internal Auditor

7.2.2 Commercial Layer

- General Manager
 - Sales Supervisor
 - Yangon Sales Executives
 - Mandalay Sales Executive
 - Key Account Sales
 - Purchasing Officers
 - Warehouse Supervisor
 - Customer Service team
 - Delivery and branch execution roles

7.2.3 Finance Layer

- Finance Manager
 - Accountants
 - Cashier

7.2.4 Support Layer

- HR/Admin Officer → General Manager
- IT Support → General Manager initially, later ERP Administrator if created

7.3 Branch Consideration

Branch assignment should remain explicit for every employee. Reporting lines may remain function-based even when employees are branch-based.

8. Planned User Architecture

8.1 User Design Principle

Not every employee should receive the same level of ERP access. Users should be created based on actual process ownership.

8.2 User Categories

8.2.1 Full ERP Users

Users who will operate transactions or supervise approvals.

8.2.2 Restricted ERP Users

Users who need narrow operational access only.

8.2.3 View / Oversight Users

Users who mainly review reports, dashboards, and approvals.

8.3 Recommended Initial User Set

8.3.1 Executive and Management Users

- Managing Director
- General Manager
- Finance Manager or lead accountant acting in that role
- Sales Supervisor
- Warehouse Supervisor

8.3.2 Operational Users

- Sales Executives
- Key Account Sales
- Purchasing Officers
- Inventory Clerk
- Storekeepers
- Accountants
- Cashier
- HR/Admin Officer

- Customer Service Staff

8.3.3 Technical / Support Users

- IT Support
- future ERP Administrator

8.4 Suggested User Creation Sequence

Phase A

- General Manager
- Sales Supervisor
- Accountant lead / Finance lead
- Warehouse Supervisor
- Purchasing Officer (Yangon)
- Sales Executive (Yangon)

Phase B

- remaining sales users
- Mandalay purchasing user
- inventory and warehouse users
- cashier
- customer service users

Phase C

- HR/Admin user
- IT support users
- executive dashboard users
- future audit or ERP admin users

9. Role Catalog

9.1 Role Design Principle

Role design should combine ERPNext standard roles with controlled business assignments.

9.2 Standard ERPNext Functional Roles to Reuse

- Sales User
- Sales Manager
- Purchase User
- Purchase Manager
- Stock User
- Stock Manager
- Accounts User
- Accounts Manager
- HR User
- HR Manager
- Delivery User
- Delivery Manager
- Support Team
- Desk User
- Auditor
- System Manager

9.3 Controlled Business Roles to Formalize

- Executive Approver
- Branch Operations Reviewer
- Pricing Reviewer
- Credit Control Reviewer
- Inventory Controller
- Payment Reviewer

- ERP Administrator
- Report Consumer

These may be implemented either as actual roles or as policy assignments layered onto standard ERPNext roles.

10. Role-to-User Mapping

10.1 Executive and Management

Managing Director

Recommended roles:

- Desk User
- Report Consumer
- Executive Approver

General Manager

Recommended roles:

- Desk User
- Sales Manager
- Purchase Manager
- Stock Manager
- Branch Operations Reviewer
- Pricing Reviewer

Finance Manager / Finance Lead

Recommended roles:

- Desk User
- Accounts Manager
- Payment Reviewer
- Credit Control Reviewer

10.2 Sales

Sales Supervisor

Recommended roles:

- Desk User
- Sales Manager
- Pricing Reviewer

Sales Executives

Recommended roles:

- Desk User
- Sales User

Key Account Sales

Recommended roles:

- Desk User
- Sales User

10.3 Procurement

Purchasing Officers

Recommended roles:

- Desk User
- Purchase User

Optional manager coverage, if needed later:

- Purchase Manager for lead purchasing authority only

10.4 Warehouse

Warehouse Supervisor

Recommended roles:

- Desk User
- Stock Manager
- Delivery Manager

- Inventory Controller

Inventory Clerk

Recommended roles:

- Desk User
- Stock User

Storekeepers

Recommended roles:

- Desk User
- Stock User
- Delivery User if dispatch involvement exists

10.5 Finance

Accountants

Recommended roles:

- Desk User
- Accounts User

One senior accountant or acting finance lead may additionally receive:

- Accounts Manager

Cashier

Recommended roles:

- Desk User
- Accounts User

Restricted via permissions and process scope.

10.6 HR / IT / Service

HR/Admin Officer

Recommended roles:

- Desk User

- HR User

IT Support

Recommended roles:

- Desk User
- Report Consumer

Do not grant System Manager broadly.

Customer Service Staff

Recommended roles:

- Desk User
- Support Team

11. Permission Matrix Design

11.1 Permission Model

Permissions should be designed on the following axes:

- function
- branch
- warehouse
- customer or territory scope
- approval level

11.2 Sales Permissions

Sales Executive

Can:

- create and edit leads, opportunities, quotations, sales orders
- view assigned customers
- view stock availability

Cannot:

- approve exceptional discounts

- submit finance-sensitive postings
- perform stock control transactions

Sales Supervisor

Can:

- review and approve routine sales transactions
- monitor team quotations and orders
- view team performance

Cannot:

- release payments
- perform finance approval functions

11.3 Procurement Permissions

Purchasing Officer

Can:

- create RFQs
- create supplier quotations
- prepare purchase orders

Cannot:

- approve major purchase exceptions
- release payments

11.4 Warehouse Permissions

Inventory Clerk / Storekeeper

Can:

- receive stock
- issue stock
- transfer stock
- perform stock movements in assigned warehouse scope

Cannot:

- approve stock write-off
- approve major reconciliation

Warehouse Supervisor

Can:

- review stock movement
- approve controlled stock adjustments
- monitor stock discrepancies

11.5 Finance Permissions

Accountant

Can:

- create invoices, journal entries, payment entries within process scope
- perform reconciliation

Cannot:

- approve executive commercial exceptions unless explicitly assigned

Cashier

Can:

- post cash-related entries within restricted scope
- record receipts and payments as allowed

Cannot:

- hold broad accounting control privileges

11.6 Service and Support Permissions

Customer Service Staff

Can:

- manage customer issue records
- update service status

- view relevant customer history

Cannot:

- alter stock or finance transactions broadly

IT Support

Can:

- access support-relevant views
- assist with non-administrative operational support

Cannot:

- hold unrestricted system governance without explicit authorization

12. Branch and Warehouse Restrictions

12.1 Branch Restriction Policy

All users should be assigned a primary branch where applicable. Branch-aware permissions should be used to limit operational visibility where justified.

12.2 Warehouse Restriction Policy

Warehouse users should only transact against authorized warehouses.

Recommended mapping:

Yangon Warehouse Team

- Yangon Main Warehouse - MMOB
- Yangon Showroom Counter - MMOB where applicable
- relevant transfer/transit locations as operationally required

Mandalay Warehouse Team

- Mandalay Warehouse - MMOB
- relevant transfer/transit locations as operationally required

Restricted Control Warehouses

- Returns and Damaged - MMOB
- Goods In Transit - MMOB

- Transit Warehouse - MMOB

These should not be broadly editable by all stock users.

13. Approval Matrix

13.1 Sales Approval Matrix

Routine Sales Quotation / Order

- Sales Executive → Sales Supervisor

Discount Exception / Sensitive Margin Case

- Sales Executive → Sales Supervisor → General Manager

Credit-Risk Case

- Sales Executive → Sales Supervisor → Finance Manager

Major Commercial Exception

- Sales Executive → Sales Supervisor → General Manager → Managing Director

13.2 Procurement Approval Matrix

Routine Purchase

- Purchasing Officer → General Manager

Higher-Value or Sensitive Purchase

- Purchasing Officer → General Manager → Finance Manager

Strategic / Exceptional Purchase

- Purchasing Officer → General Manager → Finance Manager → Managing Director

13.3 Inventory Approval Matrix

Routine Stock Movement

- Warehouse User → Warehouse Supervisor

Stock Adjustment / Damaged Stock / Reconciliation Variance

- Warehouse User → Warehouse Supervisor → Finance Manager

Major Discrepancy

- Warehouse Supervisor → Finance Manager → General Manager

13.4 Finance Approval Matrix

Routine Payment

- Accountant / Cashier → Finance Manager

Exceptional Payment

- Accountant → Finance Manager → Managing Director

Sensitive Journal / Financial Override

- Accountant → Finance Manager

14. Workspace Assignment Plan

14.1 Executive Workspace

Assigned to:

- Managing Director
- General Manager

Content:

- branch sales comparison
- stock value snapshot
- receivable exposure
- major approvals

14.2 Sales Workspace

Assigned to:

- Sales Supervisor
- Sales Executives
- Key Account Sales

Content:

- quotations
- sales orders
- customer follow-up

- territory/customer reports

14.3 Procurement Workspace

Assigned to:

- Purchasing Officers
- General Manager for approval visibility

Content:

- RFQs
- supplier quotations
- POs in progress
- replenishment triggers

14.4 Warehouse Workspace

Assigned to:

- Warehouse Supervisor
- Inventory Clerk
- Storekeepers

Content:

- stock entry queue
- transfer queue
- pending receipts
- warehouse stock views

14.5 Finance Workspace

Assigned to:

- Finance Manager
- Accountants
- Cashier

Content:

- invoices
- receipts
- payables
- payment approvals
- receivable aging

14.6 Service Workspace

Assigned to:

- Customer Service Staff

Content:

- customer issues
- return/service records
- open follow-ups

14.7 Support Workspace

Assigned to:

- HR/Admin Officer
- IT Support
- ERP Administrator when created

Content:

- employee maintenance
- support tasks
- governance/admin utilities as authorized

15. Implementation Checklist

15.1 Phase I - Structural Cleanup

- finalize department hierarchy
- identify legacy departments to retire from active use
- confirm warehouse business purposes

- confirm branch ownership model

15.2 Phase II - Employee and Reporting Setup

- confirm employee-to-department mapping
- confirm employee-to-branch mapping
- define reporting lines
- confirm active designation set

15.3 Phase III - User Creation

- create users for management and key control roles first
- create operational users second
- create support users last

15.4 Phase IV - Role Assignment

- assign standard ERPNext roles
- add restricted business governance roles where necessary
- validate no user is over-privileged

15.5 Phase V - Permission Implementation

- apply role permissions
- apply user permissions for branch/warehouse/customer scope
- validate restricted warehouses and sensitive functions

15.6 Phase VI - Workflow Deployment

- deploy sales approvals
- deploy purchase approvals
- deploy inventory approvals
- deploy finance approvals

15.7 Phase VII - Workspace Deployment

- configure workspaces by role group
- assign key reports

- simplify forms by user type

15.8 Phase VIII - Validation

- test each user group
- test each branch scenario
- test transfer and stock control scenarios
- test payment and approval scenarios

16. Recommended Immediate Next Actions

The immediate next actions should be:

1. Lock the final department hierarchy.
2. Lock the active designation list.
3. Confirm the reporting structure for the 22 current employees.
4. Finalize the planned user creation sequence.
5. Build the role-permission matrix in implementation detail.
6. Convert approval logic into actual workflow specifications.

Workspace Structure Blueprint

1. Current Workspace Status

The ERP currently contains mostly **standard ERPNext workspaces** plus one custom workspace, Sales-Execution.

This is a good position to start from because:

- the system is not yet cluttered with many custom workspaces
- role-based workspaces can now be added in a controlled way
- the standard workspaces do not need to be deleted immediately

The recommended approach is therefore:

- **add a small set of custom role-based workspaces**
 - make them the **primary daily entry points**
 - leave standard workspaces in place for now
 - later reduce visibility and reliance on standard module workspaces
-

2. Workspace Design Objective

The purpose of the workspace layer is to make ERPNext feel:

- simpler
- more role-specific
- faster for daily use
- less overwhelming

A workspace should answer one question clearly:

What does this role need to do first when logging in?

It should not try to expose everything in ERPNext.

3. Workspace Design Principles

3.1 One workspace per major role family

A workspace should support a real job, not a module.

3.2 Action-first design

The first section should contain the transactions the user performs most often.

3.3 Control and review second

The second section should contain approvals, exceptions, and review reports.

3.4 Reporting third

The third section should contain performance or analytical reports.

3.5 Limited visible options

A user should not land on a workspace that shows all possible system functions.

3.6 Standard modules remain in the background

The standard workspaces can remain for now, but the new custom workspaces should become the preferred role entry points.

4. Recommended Workspace Portfolio

4.1 Executive Console

Target users

- Managing Director
- General Manager
- Finance Lead for cross-functional oversight

Purpose

Provide a management dashboard for business review, approval monitoring, and exception visibility.

Primary actions

- review pending approvals
- review sales summary
- review stock exposure
- review receivable exposure

Key shortcuts

- Quotations
- Purchase Orders
- Stock Entry
- Payment Entry
- Customers
- Items

Key reports

- Sales Analytics
- Accounts Receivable Summary
- Stock Balance
- Item-wise Sales Register
- General Ledger or Profit-related finance review reports

UI behavior

- minimal transaction clutter
 - more report cards and approval links
 - no operational overload
-

4.2 Sales Console

Target users

- Sales Supervisor
- Sales Executives
- Key Account Sales

Purpose

Support daily customer-facing selling with the fewest possible clicks.

Primary actions

- create Opportunity
- create Quotation
- create Sales Order
- view Customer
- review open quotations and open orders

Key shortcuts

- Opportunity
- Quotation
- Sales Order
- Customer
- Item
- Pricing / price-aware customer documents

Key reports

- Sales Analytics
- Item-wise Sales Register
- Customer-wise Sales History
- Quotation trends
- Open Orders

UI behavior

- customer and quotation first
- remove unrelated finance, HR, and technical clutter
- highlight pending approvals and order status

4.3 Procurement Console

Target users

- Purchase Officers

- General Manager for purchase review

Purpose

Support replenishment, supplier comparison, and purchase execution.

Primary actions

- create Request for Quotation
- create Supplier Quotation
- create Purchase Order
- review Supplier
- review Item reorder needs

Key shortcuts

- Request for Quotation
- Supplier Quotation
- Purchase Order
- Supplier
- Item

Key reports

- Purchase Analytics
- Supplier-wise Purchase Register
- Ordered Items to be Delivered
- Item Shortage / reorder-related reports
- Purchase Order trends

UI behavior

- supplier and item sourcing first
 - approval visibility for controlled purchasing
 - no unnecessary HR or CRM clutter
-

4.4 Warehouse Console

Target users

- Warehouse Supervisor
- Inventory Clerk
- Storekeepers

Purpose

Support stock movement, receiving, transfer, and warehouse control.

Primary actions

- create Stock Entry
- review Material movements
- review transfer activity
- review stock by warehouse

Key shortcuts

- Stock Entry
- Stock Balance
- Warehouse
- Item
- Serial / Batch related tools if later needed

Key reports

- Stock Balance
- Stock Ledger
- Item Balance
- Stock Projected Qty / reorder visibility
- Movement and transfer review reports

UI behavior

- queue-based, operational layout

- warehouse-specific focus
 - quick access to movement transactions
 - clear visibility on transit and returns warehouses for authorized users
-

4.5 Finance Console

Target users

- Finance Lead
- Accountants
- Cashier

Purpose

Support receivables, payments, invoicing, and financial review.

Primary actions

- create Payment Entry
- create Sales Invoice where relevant
- create Purchase Invoice where relevant
- review Journal Entry
- review party balances

Key shortcuts

- Payment Entry
- Sales Invoice
- Purchase Invoice
- Journal Entry
- Customer
- Supplier

Key reports

- Accounts Receivable Summary

- Accounts Payable Summary
- General Ledger
- Payment Ledger or cash movement review
- Bank / cash related reports

UI behavior

- party balances and payment control first
- strong focus on approval-related payment documents
- limited exposure to stock execution screens

4.6 Customer Service Console

Target users

- Customer Service Staff

Purpose

Support customer issue handling, return follow-up, and service tracking.

Primary actions

- review customer issue records
- review returned items
- review customer history
- follow up open service cases

Key shortcuts

- Issue
- Customer
- Item
- Stock Entry or return-related link where appropriate

Key reports

- Issue Summary / support pipeline

- return-related stock review
- customer complaint tracking
- aging of open cases

UI behavior

- customer and issue oriented
 - access only to relevant return / service functions
 - avoid broad purchasing or finance options
-

4.7 HR and Admin Console

Target users

- HR/Admin Officer

Purpose

Support employee, leave, and basic administrative functions.

Primary actions

- review Employee
- review attendance / leave items
- maintain basic HR records

Key shortcuts

- Employee
- Leave Application
- Attendance
- Department
- Designation

Key reports

- employee list
- leave status

- attendance summary
- HR operational reports

UI behavior

- isolated from commercial and stock activity
 - focused on people and admin tasks only
-

4.8 ERP Admin Console

Target users

- IT Support
- future ERP Administrator

Purpose

Support controlled configuration, user management, and system maintenance.

Primary actions

- review Users
- review Roles
- review User Permissions
- review Workflows
- review Workspaces

Key shortcuts

- User
- Role
- User Permission
- Workflow
- Workspace
- Department
- Designation

Key reports

- user access review
- workflow review
- audit / setup review reports where available

UI behavior

- reserved for system governance
 - not for ordinary daily business users
-

5. Priority Implementation Order

The workspaces should not all be created at once.

5.1 First-wave workspaces

These directly affect the main business flow:

1. Sales Console
2. Procurement Console
3. Warehouse Console
4. Finance Console

5.2 Second-wave workspaces

These improve management and support functions:

5. Executive Console
6. Customer Service Console
7. HR and Admin Console
8. ERP Admin Console

This order is recommended because the first wave supports the highest daily transaction volume.

6. Navigation Simplification Rules

6.1 Sales users

Should primarily live in:

- Sales Console

They should not need to start from:

- Buying
- Stock
- Invoicing
- ERP Settings
- Core setup workspaces

6.2 Warehouse users

Should primarily live in:

- Warehouse Console

They should not need to browse:

- CRM
- Buying
- Payroll
- broad finance pages

6.3 Finance users

Should primarily live in:

- Finance Console

They should not need operational stock movement views as their main navigation.

6.4 Management users

Should primarily live in:

- Executive Console

They should not navigate through transaction-heavy module workspaces.

7. Form Behavior by Role

The workspace layer should be paired with form simplification logic.

7.1 Quotation / Sales Order

For sales roles, prioritize:

- customer
- items
- quantity
- rate
- delivery date
- approval status

7.2 Purchase Order

For purchase roles, prioritize:

- supplier
- items
- rate
- delivery date
- approval status

7.3 Stock Entry

For warehouse roles, prioritize:

- source warehouse
- target warehouse
- items
- movement type
- workflow state

7.4 Payment Entry

For finance roles, prioritize:

- party
 - payment type
 - amount
 - reference documents
 - workflow state
-

8. Practical Recommendation for Implementation

The best implementation pattern is:

Step 1

Create the **first-wave workspaces** only.

Step 2

Assign each workspace to the relevant role-slot users.

Step 3

Populate each workspace with:

- top actions
- top reports
- approval/review links

Step 4

Test actual user behavior.

Step 5

Only then refine visibility of standard workspaces.

This avoids over-customizing too early.

9. Recommended Next Action

The next practical deliverable should be:

Workspace Configuration Matrix

For each workspace, it should specify:

- workspace name
- target users
- primary shortcuts
- primary reports
- approval links
- whether public or restricted
- rollout priority

That matrix will then become the basis for actual workspace creation.
